

Project Case Study Template

(Reusable — used in Course 16 Lessons 4 and 6. Fill one out per project.)

Project Name: _____

Problem / Goal: What were you trying to solve or build?

Tools Used: _____

My Approach: What did you actually do, in order?

Result: What happened? What works right now?

What I Learned: What would you do differently, or what skill did this prove?

Link / Screenshot: (paste a live link, or note where a screenshot goes)

Filled Example — Fictional "Jordan R."

- **Project Name:** Weather Mood App
- **Problem / Goal:** Give people one small, achievable activity suggestion based on today's forecast.
- **Tools Used:** HTML, CSS, JavaScript, a free weather API
- **My Approach:** Built a simple form, fetched forecast data, mapped conditions to a small set of activity suggestions, styled it to feel calm and simple.
- **Result:** A working single-page tool that updates suggestions live based on real weather data.
- **What I Learned:** How to work with an external API and handle cases when data doesn't load.
- **Link:** (live demo URL would go here)
