

Student Guide — Lesson 6: Voice-Activated Story

Today you explore an interactive story that YOU help control! 🚀

What's inside

- A story with multiple scenes.
- At least one choice point where you press a number key or click to decide what happens next.
- Broadcasts that move the story from scene to scene (just like Course 11!).

Try it

1. Open `project.sb3`, click the green flag.
2. Read the story and make your choice when asked.
3. Play again and choose differently — see the other path!

Look at the code

Find the broadcast names used to move between scenes. Are they spelled exactly the same everywhere they're used?

Important truth

🤖 Robot Tip: Right now, number keys/clicks stand in for spoken voice commands. Later, following the [AI_Training_Guide.md](#), you can train a REAL voice model in ML4Kids and swap it in!

New words

- **Branching story:** a story where the reader's choices lead to different paths and endings.
- **Scene:** one part of the story, often its own backdrop and dialogue.
